Dual-Chamber Water Conditioners

For consumers who demand "the very best"!

Metered valve for greater efficiency

Our control valve is metered for greater efficiency and reduced salt usage, because regeneration of the softener resin is based on water consumption. Digital LCD display provides information on usage and gallons remaining before the next regeneration cycle.

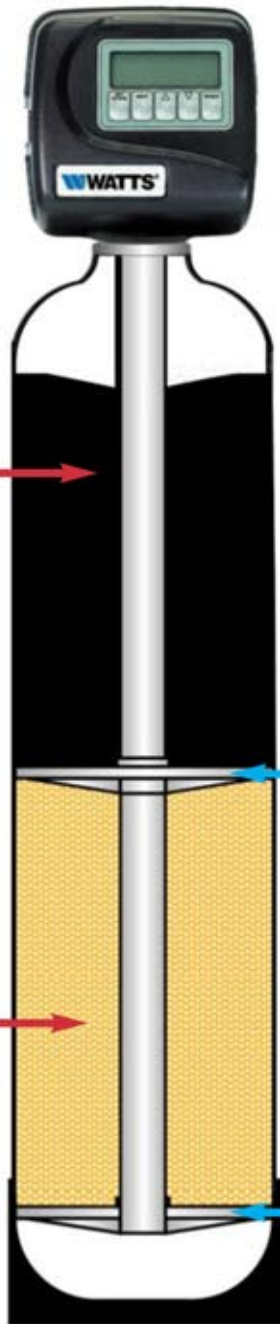

Activated Carbon

Activated carbon is used for pre-treatment to remove chlorine tastes, odors and to extend life of the ion exchange resin.

High Efficiency Ion Exchange Resin

Fine mesh resin is used for increased efficiency and to enhance performance with high iron content water.

Vortech Inside

Vortech Inside

Features & Benefits

- Designed for whole house water treatment.
- Extend the life of the softening resin by providing carbon pretreatment to reduce chlorine.
- Removes calcium and magnesium, the most significant minerals that cause hard water that reduces plumbing and appliance life.
- Reduces iron staining (additional equipment may be required based on iron levels and type).
- High salt and water efficiency with up-flow brining.
